

DNA-based markers in plants

Filesize: 8.33 MB

Reviews

This is an incredible book that I have ever read through. It can be rally exciting throgh reading through time period. I discovered this publication from my i and dad recommended this pdf to find out.

DNA-BASED MARKERS IN PLANTS

[DOWNLOAD](#)

Book Condition: New. Publisher/Verlag: Springer Netherlands | The double helix architecture of DNA was elucidated in 1953. Twenty years later, in 1973, the discovery of restriction enzymes helped to create recombinant DNA molecules in vitro. The implications of these powerful and novel methods of molecular biology, and their potential in the genetic manipulation and improvement of microbes, plants and animals, became increasingly evident, and led to the birth of modern biotechnology. The first transgenic plants in which a bacterial gene had been stably integrated were produced in 1983, and by 1993 transgenic plants had been produced in all major crop species, including the cereals and the legumes. These remarkable achievements have resulted in the production of crops that are resistant to potent but environmentally safe herbicides, or to viral pathogens and insect pests. In other instances genes have been introduced that delay fruit ripening, or increase starch content, or cause male sterility. Most of these manipulations are based on the introduction of a single gene - generally of bacterial origin - that regulates an important monogenic trait, into the crop of choice. Many of the engineered crops are now under field trials and are expected to be commercially produced within the next few years. The early successes in plant biotechnology led to the realization that further molecular improvement of plants will require a thorough understanding of the molecular basis of plant development, and the identification and characterization of genes that regulate agronomically important multi genic traits. | 1. Some concepts and new methods for molecular mapping in plants; B. Burr. 2. RFLP technology; G. Kochert. 3. Constructing a plant genetic linkage map with DNA markers; N.D. Young. 4. Mapping quantitative trait loci; S.J. Knapp. 5. Breeding multigenic traits; C.W. Stuber. 6. Nuclear DNA markers in systems and evolution; R....
