Brand New Book ***** Print on Demand *****.AEROSPACE ENGINEERS DESIGN AIRCRAFT and spacecraft, and supervise the manufacturing and testing processes. They use advanced physics and mathematics, and work with state-of-the-art equipment and computer programs to stay on the cutting edge of design technology. Many aerospace engineers work in the aircraft industry, while others work for the National Aeronautics and Space Administration (NASA), or the Department of Defense. To become an aerospace engineer requires at least a bachelor s degree, and most engineers earn a master s degree. Study can be focused in aerospace engineering, but another branch of engineering, such as mechanical or electrical, is also acceptable. Entry-level engineers do not need to be licensed, but after four years of work experience it is advisable to take the professional licensure exam. There is also a place in this field for those who prefer to work with their hands. While aerospace engineers do most of their work on the computer, aerospace engineering technicians do the hands-on work. They follow the specifications of the engineers and meet with them regularly to discuss operational details, and to review product test results. They may use computer simulations to test new designs, but they are also involved in manufacturing and installing actual parts and systems. The educational requirements for technicians are less rigorous than those for engineers, and there are a couple of choices. Some employers require a diploma or certificate in engineering or aerospace technology from a vocational program. Other employers want to see an associate degree. Either way, it only takes a couple of years to get the necessary training. Still other employers offer on-the-job training programs that allow candidates to begin work without a degree. That is...
